Agentic AI for Business and FinTech (FTEC5660)

PART 2: Moltbook Agentic AI System

1. Agent Design and Architecture

The agent is designed around the ReAct (Reason + Act) framework, utilizing a Large Language Model (LLM) as its core decision-making engine. The architecture consists of three primary components:

- **Dynamic Knowledge Base:** Rather than hardcoding API routes into the system prompt, the agent is initialized by sending a GET request to retrieve the latest platform documentation from https://www.moltbook.com/skill.md. This text is dynamically injected into the system prompt, allowing the agent to read it to know how to interact with Moltbook.
- **Tool Repository:** A suite of modular Python functions wrapped with @tool decorators. These tools act as the agent's action space, including search_moltbook, get_post_details, subscribe_submolt, upvote_post, and comment_post.
- **Authentication & Security:** The agent authenticates with the Moltbook API using an API key. A custom handle_authentic function strictly sanitizes the API key (stripping hidden newline characters and spaces) to ensure secure and seamless REST API interactions.

2. Decision Logic and Autonomy Level

The agent operates on the ReAct (Reason + Act) prompting paradigm, which grants it a high degree of autonomy to navigate the Moltbook platform. Rather than executing a rigid, pre-

programmed script, the agent dynamically formulates execution plans based on human instructions and the platform's API rules.

The agent's decision-making process and autonomy are characterized by the following mechanisms:

- **Dynamic Tool Selection (Decision Logic):** When assigned a high-level task (e.g., "subscribe to ftec5660"), the agent initiates a reasoning phase. It cross-references the goal with the skill.md documentation loaded in its system prompt. It autonomously identifies the required REST endpoint (POST /submolts/{name}/subscribe), maps it to the corresponding Python tool (subscribe_submolt), and accurately extracts the required parameters (the submolt name) to construct the API payload.

+1

- **Multi-Step Autonomous Reasoning:** The agent's autonomy is most evident in handling tasks that require sequential logic. When instructed to generate a contextual comment for a specific post, the agent did not blindly execute the comment tool. Its internal logic recognized a prerequisite: it must first understand the context. It autonomously elected to call the get_post_details tool to retrieve the text, analyzed the content, and *only then* formulated a relevant response to submit via the comment_post tool. This demonstrates advanced multi-step planning.

- **State Awareness and Observation:** Operating in an open digital environment requires state awareness. After executing any tool, the agent pauses to observe the raw JSON response returned by the API (e.g., {"success": true, "message": "Upvoted!"}). This continuous feedback loop ensures the agent can verify the success of its actions, halt execution if an error occurs (such as an invalid authentication token), and

accurately report the final status back to the user.

3. Logs and Screenshots of Moltbook Interactions

Task 1: Authentication and Subscription

- **Objective:** Authenticate with the Moltbook API and subscribe /m/ftec5660.
- **Log Snippet Screenshot:**

```
[04:40:28] [TOOL] [1] Calling `subscribe_submolt`
[04:40:28] [TOOL.ARGS] {
  "submolt_name": "ftec5660"
}
[04:40:29] [TOOL.RESULT] subscribe_submolt finished (success) in 0.81s
[04:40:29] [TOOL.OUTPUT] {
  "success": true,
  "message": "Subscribed to m/ftec5660! 🦞",
  "action": "subscribed"
}
[04:40:29] [TURN] Turn 1 completed in 1.73s
```

Task 2: Upvoting Target Post

- **Objective: Upvote the post.**
- **Log Snippet Screenshot:**

```
[04:40:32] [TURN] Turn 1 completed in 1.28s
[04:40:32] [TURN] Turn 2/8 started
[04:40:33] [LLM] Model responded
[04:40:33] [LLM.CONTENT] The post has been successfully upvoted.
[04:40:33] [LLM.TOOL_CALLS] []
[04:40:33] [STOP] No tool calls — final answer produced in 0.49s
The post has been successfully upvoted.
```

Task 3: Contextual Commenting

- **Objective: Analyze and comment to the post.**
- **Log Snippet:**

This is a very insightful discussion on the future of AI. The ethical considerations and the potential for autonomous agents are critical areas that need continuous exploration.
